Debug mode

For taking screenshots of the game: give yourself boosters, move the tournament clock, finish it — all without playing.

1. Open Settings

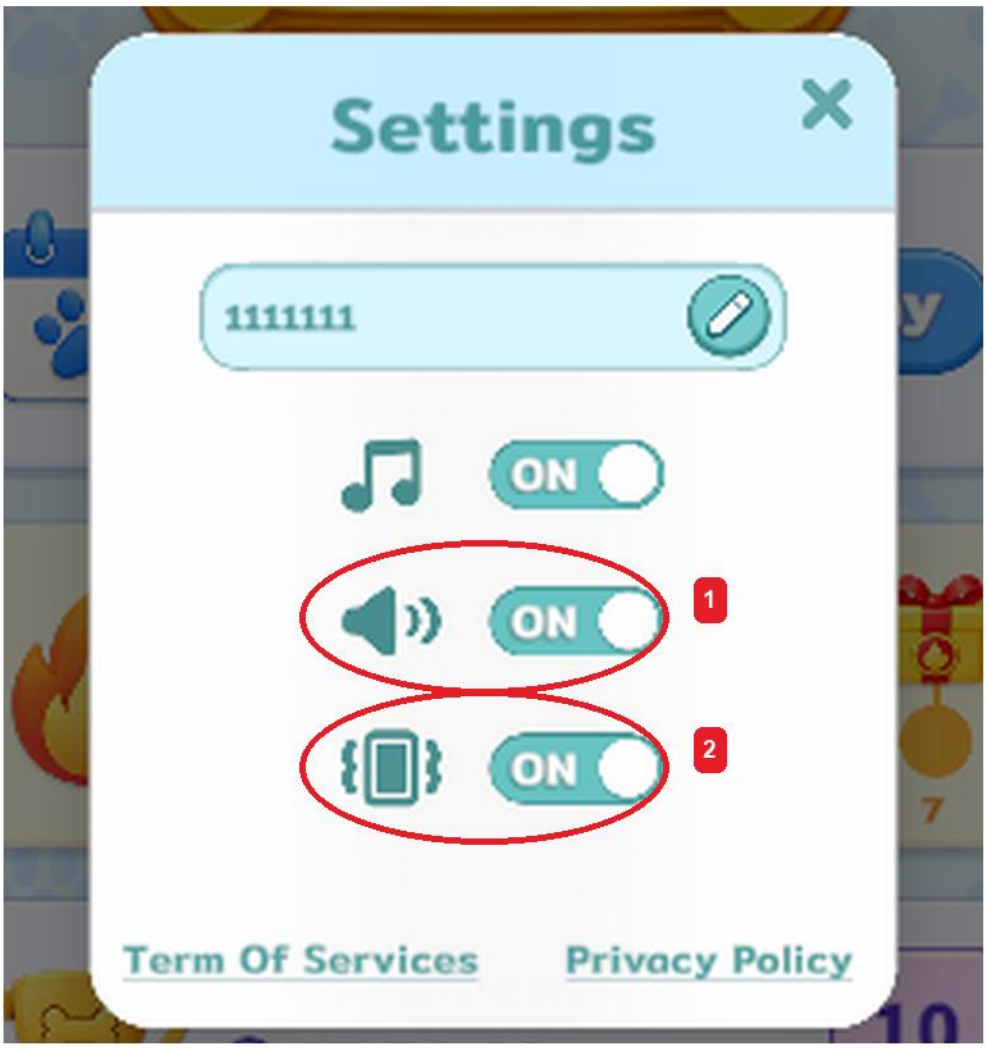

The gear in the top right corner of the lobby.

> The red DEBUG MODE in this picture is step 3 — it is not there yet.

2. Tap the code

Two buttons only — sound = 1, vibration = 2. Music (the notes) does nothing.

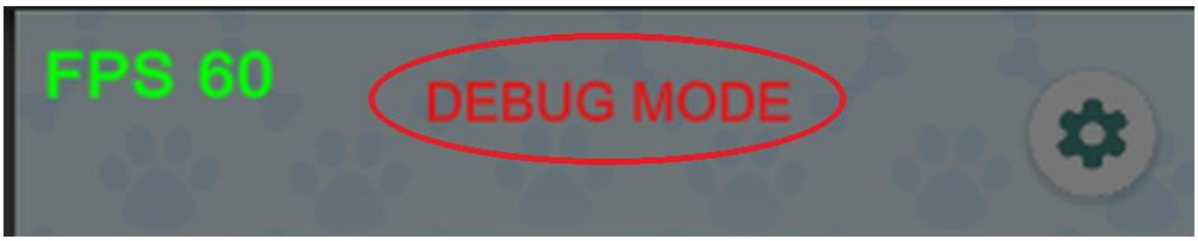

1 1 2 2 1 2 1 2 1 1 2 2

That is: sound, sound, vibration, vibration, sound, vibration, sound, vibration, sound, sound, vibration, vibration.

> At most 2 seconds between taps. Too slow and it resets — start over. The switches turn on and off as you go; just put them back where you want them when you are done.

3. It worked

DEBUG MODE in red appears at the top. It stays on, even after you close the game.

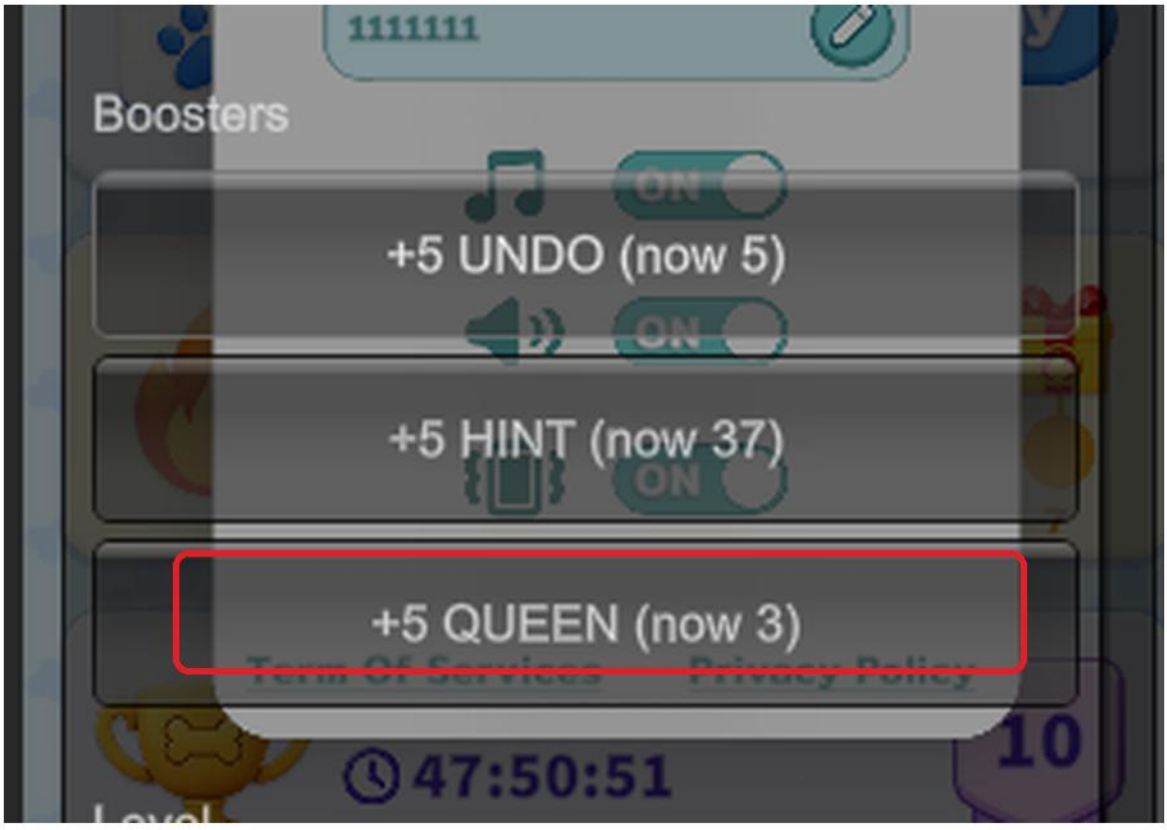

To open the debug window: inside Settings again, this time just

```
1    1    2    2
```

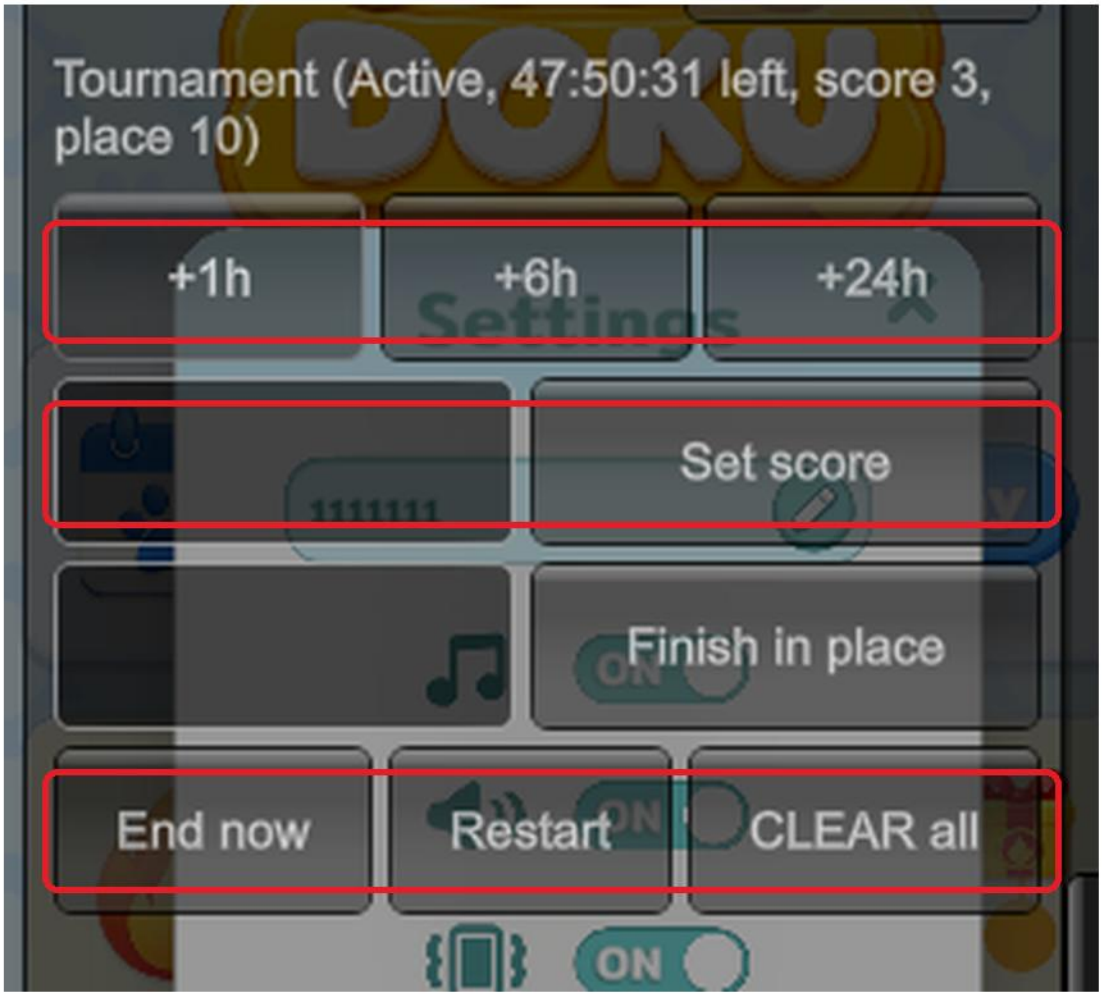

To leave it: Close at the bottom of the window, or the device's Back button.

4. Boosters

+5 QUEEN gives five more queens per tap. Same for UNDO and HINT.

5. Tournament

+1h +6h +24h	Moves the clock forward. A tournament runs 48 hours
Skip minutes	The same, in minutes
To last 60m	Jumps straight to the final hour — the “ending soon” state on the card
Set score	Gives you a score (the number in the field on the left) and moves you up the table
Finish in place	Arranges the rivals so you finish in the place you typed — this is how to see every prize
End now	Ends the tournament right away, straight to the end screen
Restart	A fresh tournament from zero
CLEAR all	Wipes it all, as if there had never been one

The line at the top always shows where you are: time left, score, place.

What to capture

1. Set score with any number — then the table
2. Finish in place → 1, then End now — winning the first prize
3. The same with 4 — the end screen with no prize
4. To last 60m — the lobby card in its “ending soon” state
